

# 1. Goal

Learn where URL level authorization is enough, where we need method level security and how to use it.

## 2. Lesson Notes

### Method Level Security

*@EnableGlobalMethodSecurity*

- additional options:

- *securedEnabled = true*
- *prePostEnabled = true*

### Secure a Method

- example via the *@Secured* annotation:

```
@Secured(Privileges.CAN_USER_READ)
```

- example via the *@PreAuthorize* annotation:

```
@PreAuthorize(Privileges.CAN_USER_READ)
```
